

Cisco offers free collaboration and security licenses

The current coronavirus pandemic has caused many businesses to undertake a rapid, unexpected transition to a remote workforce. This can be especially problematic for any company, and can ultimately disrupt business continuity. In addition to issues with collaboration and communication, remote workers can be a prime target for cyberattacks.

In an effort to help businesses adapt to these turbulent times, Cisco is offering free and extended licenses for their groundbreaking collaboration and security software through July 1, 2020:

- **Free 90-day extended Webex license**
- **Free 90-day extended Umbrella license**
- **Cisco Duo**
- **Cisco Anyconnect**

Contact the team at GreenPages - your Cisco solution providers - and get set up with your free licenses today!

Best Regards,

The GreenPages Team

Cisco Webex

Cisco Webex expanded its free offerings to allow employees to stay connected to their teams and continue their business operations. In response to customers asking us for guidance, today, Cisco is broadening this offer to include security for remote employees by providing extended free licenses and expanded usage counts at no extra charge for three of our key security technologies that are designed to protect remote workers anywhere, anytime and on any device. To apply for an extended free WebEx trial please **contact us today.**

Why everyone is choosing WebEx:

- Integrate with the apps you love to use everyday, so your work remains connected.
- With WebEx Video Conferencing bring everyone together, face-to-face, with video conferencing and screen sharing on any device.
- Team collaboration happens all in one place, from anywhere with messaging, file and screen sharing, video meetings, and whiteboarding.
- Secure, easy-to-manage cloud calling that's simple to set up and even goes with you on the road.
- By the numbers:
 - 86% report shorter, more effective meetings
 - 83% report faster decision-making
 - 90% report improved collaboration
 - 88% report easy engagement

**Work remotely and stay connected.
Unlimited usage on the most secure collaboration
platform!**

Cisco Umbrella

Cisco Umbrella is a cloud-native platform that delivers the most secure, reliable, and fastest internet experience. Umbrella unifies firewall, secure web gateway, DNS-layer security, cloud access security broker (CASB), and threat intelligence solutions into a single platform to help businesses of all sizes secure their network. As the industry's first Secure Internet Gateway in the cloud, Cisco Umbrella provides the first line of defense against threats on the internet.

Why Umbrella:

- Threat protection like no other - block malware, C2 callbacks, and phishing
- Predictive intelligence - automates threat protection by uncovering attacks before they launch
- Worldwide coverage in minutes - no hardware to install or software to maintain
- Weekly security report

Cisco Duo enables organizations to verify users' identities and establish device trust before granting access to applications. By employing a zero-trust model, it decreases the attack surface and reduces risk. With this offer, existing customers can exceed their user limit to support an increase in remote workers, and new customers can access a free license. Cisco Duo uses Two-factor authentication (2FA), a type of multi-factor authentication (MFA) that strengthens access security by requiring two methods (also referred to as authentication factors) to verify your identity. These factors can include something you know - like a username and password - plus something you have - like a smartphone app - to approve authentication requests.

2FA protects against phishing, social engineering and password brute-force attacks and secures your logins from attackers exploiting weak or stolen credentials. Two-factor authentication (2FA) is the foundational element of a zero trust security model. In order to protect sensitive data, you must verify that the users trying to access that data are who they say they are.

Why Duo:

- Confirm user identities
- Gain visibility into access activities
- Ensure trustworthiness of user devices
- Enforce risk based and adaptive policies
- Two-Factor authentication and zero trust architecture
- Ensure secure connections to all device

Establishing user trust

Gaining visibility into devices

Establishing device trust

Enforcing adaptive policies

Enabling secure access to all apps

Cisco Anyconnect

Cisco AnyConnect Secure Mobility Client empowers employees to work from anywhere on company laptops or personal mobile devices. It also provides the visibility and control security teams need to identify who and which devices are accessing their infrastructure. Existing AnyConnect customers can exceed their user limit to support an increase in remote workers, and new customers can access a free license.

Why Anyconnect:

- Give any user highly secure access to the enterprise network, from any device, at any time, in any location
- Gain more insight into user and endpoint behavior with full visibility across the extended enterprise Defend against threats, no matter where they are
- Provide a consistent user experience across devices, both on and off premises, without creating a headache for your IT teams
- Simplify management with a single agent
